

TradingView Bandit Alert Router

Sample routing report for a Thompson Sampling alert workflow. The router validates, blocks, routes, and records feedback without touching broker execution.

ROUTED

3

accepted alerts

BLOCKED

1

guarded before policy

POLICY

Thompson

route selection

Decision Log

Alert	Status	Route	Reason
report-0001	routed	telegram_ops	selected by Thompson Sampling
report-0002	routed	discord_research	selected by Thompson Sampling
report-0003	blocked	-	confidence is below the routing threshold
report-0004	routed	telegram_ops	selected by Thompson Sampling

Evidence Contract

Validation

Pydantic rejects malformed webhook payloads.

Idempotency

Duplicate alert IDs do not receive new route decisions.

Risk guard

Low-confidence or oversized alerts are blocked first.

Boundary

Routing feedback is not a profit forecast.

Interpretation: This service is a decision router. Live capital deployment, broker credentials, and exchange adapters belong in a separate, stricter execution boundary.
