

TradingView Bandit Alert Router

Sample routing report for a Thompson Sampling alert workflow. The router validates, blocks, routes, and records feedback without touching broker execution.

ROUTED
3
accepted alerts

BLOCKED
1
guarded before policy

POLICY
Thompson
route selection

Decision Log

Alert	Status	Route	Reason
report-0001	routed	telegram_ops	selected by Thompson Sampling
report-0002	routed	discord_research	selected by Thompson Sampling
report-0003	blocked	-	confidence is below the routing threshold
report-0004	routed	telegram_ops	selected by Thompson Sampling

Evidence Contract

Validation
Pydantic rejects malformed webhook payloads.

Idempotency
Duplicate alert IDs do not receive new route decisions.

Risk guard
Low-confidence or oversized alerts are blocked first.

Boundary
Routing feedback is not a profit forecast.

Interpretation: This service is a decision router. Live capital deployment, broker credentials, and exchange adapters belong in a separate, stricter execution boundary.
